

Town of  
Chesapeake Beach  
Pollinator Hotel  
And  
Garden

*Designed and Constructed by*  
Turtlepoint Driftwood L.L.C.  
Larry Ringgold

This trail through parts of our Town environment would never have been here for you to enjoy were it not for the richness of the plant life.

Plants must have the help of pollinators in order to bloom and make new plants. Pollinators have been increasingly threatened in recent years for a variety of reasons. Please take a look at ways to understand and help these wondrous creatures.

We recommend that you look at our quick guide and then visit your local library, book store, or even the internet for further information. Each area that we cover here is a science in itself and truly interesting.

Enjoy the garden.

If no  
Pollination or  
Pollinators

Then no  
Forests  
Flowers  
Fields  
Farms  
Fruits  
Or Vegetables

No food as we  
now know and  
enjoy

Our garden is planted with

Black eyed susan

native plants and if you are inspired to do the same our list is here. You may wish to contact your local Master Gardener program for other good suggestions:

Arrowhead Salvia

Black eyed susan (*rudbeckia laciniata*)

Blazing star (*liatria spicata*)

Butterfly weed (*asclepias tuberosa*)

Goldenrod wrinkleleaf (*solidago rugosa*)

Indigo (*baptisia australis*)

Lance leaf coreopsis (*coreopsis lanceolata*)

Parsley

Coreopsis

Milkweed

Milkweed (*asclepias incarnata*)

Natural marigold

New England Aster (*symphyotrichum novae-angliae*)

Parsley

Purple Coneflower (*echinacea purpurea*)

Summersweet, Sweet pepper bush "Ruby Spice" (*clethra alnifolia*)

Wild bergamot (*monarda fistulosa*)

Purple Coneflower

## Pollinators

Pollinators are shown here starting with the bees.

Arrowhead Salvia

---

Marigold

---

Monarda (Bee balm)

---

New England Aster

---

Summersweet Pepper

---

Carpenter bee

---

Our focus is on native solitary bees. These bees nest alone; some in ground tunnels or in holes drilled in wood. We urge you to check a good reference book as there are many nesting (and habit) situations. These bees are non-aggressive!

Although accidents can happen, if you move very slowly and don't swat you should be just fine. No stings! Like the other bees we show you in this small sampling the males do not have stingers.

Please note: while the honey bee is an important pollinator, it is not native.

We have not used scientific names for this small sampling even though experts recommend it to avoid confusion.

Depending on location (such as east vs. west coast or slight differences in habit) subfamily names may be different.

A good field guide will help you identify bees and other insects.

Bumblebee

---

Sweat bee

---

Mason bee

---

Mining bee

---

## Other insects you may see

Tachinid fly (Diptera)

---

Sand wasp (Bembix)

---

Soldier beetle (Cantharidae)

---

Hummingbird Moth (hемaris thysbe)

---

Butterflies are not as important as bees but pollinator favorites for beauty.

## Butterflies

Tiger swallowtail

---

Zebra swallowtail

---

Black swallowtail

---

Spangled Fritillary

---

Red Admiral

---

Cabbage White

---

Monarch

---

Painted Lady

---

Clouded sulphur

---

Baltimore Checkerspot

---

Spring Azure

---

Another favorite pollinator is the Ruby throated Hummingbird

All pollinators are specialists in how they collect and transfer pollen. All are drawn to the nectar of a plant and some even consume or otherwise use pollen. They each have different seasons. Some are active only in early spring, some in mid summer and some very late in the summer or early autumn.

To encourage pollinators you can:

Plant some of the suggested flowers listed in this brochure.

Plant a small herb garden to share with pollinators.

Allow a few dandelions to bloom.

Allow clover to bloom.

Avoid pesticides and herbicides.

Many local garden centers offer weekend seminars on this popular subject.

In addition to the recommendation of a good field guide to insects, one other very good publication is:

*The Xerces Society Guide to*

*Attracting Native Pollinators*

This book is loaded with information to show you the importance of this subject and help get you started.

Black Swallowtail Caterpillar

Note: Many of the photos in this brochure are from internet educational resources.
